

THE TRUTH ABOUT CELL PHONES

The 8-yr old head vs adult head

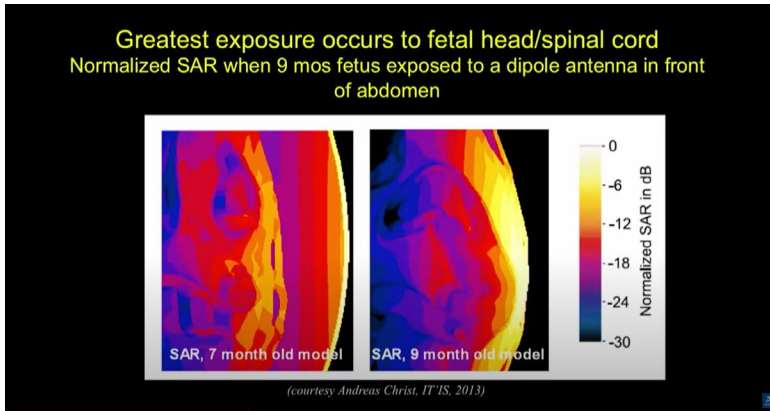

For a child who puts a phone to his head, the frontal lobe is most affected. Past 10 seconds, the radiation goes into the eye, nose and partly into the brain stem.

Carrying cell phones in pants pocket:

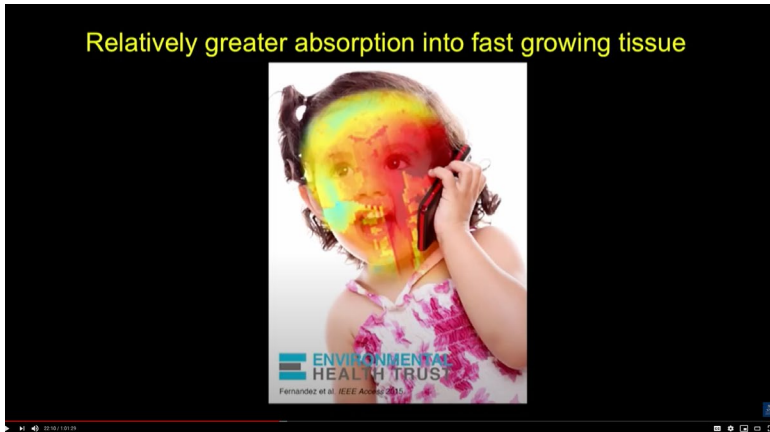

Reproductive organs and bone marrow get hit.

In 2015, Consumer Reports said (paraphrased) "Nobody should keep a phone in their pocket."

Pregnancy & cell phones:

From a study with Yale University – at the end of pregnancy when the head is near the abdomen, it is urged to be very careful to keep devices at least **20 cm away** from the body, otherwise your unborn child gets a 2-way microwave radio to their head.

6 minutes on the phone:

The red area gets part way through the eye and jawbone for adults and much more for children.

Remediate all devices! Stickers that turn this harm into helpful energy are available at www.JulieEhealth.com.
